PART ONE Transitions in Social Evolution 1

Introduction by Jürgen Gadau

- ONE The Evolution of Social Insect Mating Systems 3
Jacobus J. Boomsma, Daniel J. C. Kronauer, and Jes S. Pedersen
- TWO The Evolution of Queen Numbers in Ants: From One to Many and Back 25
Jürgen Heinze and Susanne Foitzik
- THREE Aging of Social Insects 50
Olav Rueppell
- FOUR The Ecological Setting of Social Evolution: The Demography of Ant Populations 73
Blaine J. Cole
- FIVE Control of Termite Caste Differentiation 103
Colin S. Brent

___-1
___ 0
___+1

SIX Termites: An Alternative Road to Eusociality
and the Importance of Group Benefits in
Social Insects 126
Judith Korb

SEVEN The Evolution of Communal Behavior in
Bees and Wasps: An Alternative to
Eusociality 146
William T. Wcislo and Simon M. Tierney

PART TWO Communication 169

Introduction by Thomas D. Seeley

EIGHT Cue Diversity and Social Recognition 171
Michael D. Breed and Robert Buchwald

NINE Adaptations in the Olfactory System of
Social Hymenoptera 193
Christoph J. Kleineidam and Wolfgang Rössler

TEN Fertility Signaling as a General Mechanism of
Regulating Reproductive Division of Labor
in Ants 218
Christian Peeters and Jürgen Liebig

ELEVEN Vibrational Signals in Social Wasps:
A Role in Caste Determination? 241
Robert L. Jeanne

TWELVE Convergent Evolution of Food Recruitment
Mechanisms in Bees and Wasps 264
James C. Nieh

THIRTEEN The Organization of Social Foraging in Ants:
Energetics and Communication 287
Flavio Roces

PART THREE Neurogenetic Basis of Social Behavior 309

Introduction by Robert E. Page Jr.

FOURTEEN	Behavioral Genetics in Social Insects	313	
	<i>Jürgen Gadau and Greg J. Hunt</i>		
FIFTEEN	Sensory Thresholds, Learning, and the Division of Foraging Labor in the Honey bee	333	
	<i>Ricarda Scheiner and Joachim Erber</i>		
SIXTEEN	Social Life from Solitary Regulatory Networks: A Paradigm for Insect Sociality	355	
	<i>Robert E. Page Jr., Timothy A. Linksvayer, and Gro V. Amdam</i>		
SEVENTEEN	Social Brains and Behavior—Past and Present	375	
	<i>Wulfilä Gronenberg and Andre J. Riveros</i>		
EIGHTEEN	Plasticity in the Circadian Clock and the Temporal Organization of Insect Societies	400	
	<i>Guy Bloch</i>		
PART FOUR	Theoretical Perspectives on Social Organization	000	
	<i>Introduction by Jennifer H. Fewell</i>		
NINETEEN	The Dawn of a Golden Age in Mathematical Insect Sociobiology	435	
	<i>Nigel R. Franks, Anna Dornhaus, James A. R. Marshall, and Francois-Xavier Dechaume Moncharmont</i>		
TWENTY	Positive Feedback, Convergent Collective Patterns, and Social Transitions in Arthropods	458	
	<i>Raphaël Jeanson and Jean-Louis Deneubourg</i>		
TWENTY-ONE	Division of Labor in the Context of Complexity	482	
	<i>Jennifer H. Fewell, Shana K. Schmidt, and Thomas Taylor</i>		
TWENTY-TWO	Insect Societies as Models for Collective Decision Making	503	
	<i>Stephen Pratt</i>		
TWENTY-THREE	From Social Behavior to Molecules: Models and Modules in the Middle	525	— -1 — 0 — +1
	<i>Gene E. Robinson and Andrew B. Barron</i>		

TEWNTY-FOUR	Social Insects as Models in Epidemiology: Establishing the Foundation for an Interdisciplinary Approach to Disease and Sociality 544 <i>Nina H. Fefferman and James F. A. Traniello</i>
TWENTY-FIVE	Social Insects and the Individuality Thesis: Cohesion and the Colony as a Selectable Individual 570 <i>Andrew Hamilton, Nathan R. Smith, and Matthew H. Haber</i>
TWENTY-SIX	Social Insects, Evo-Devo, and the Novelty Problem: The Advantage of “Natural Experiments” Sensu Boveri 588 <i>Jürgen Gadau and Manfred Laubichler</i>
	Index 000
