Insect rearing of *Eleodes* pinacate beetles
(lead: Andrew Johnston)

We are seeking an individual to assist in maintaining lab populations of desert stink beetles (genus *Eleodes*) and rearing their larvae. Responsibilities will include handling, feeding and watering the adults and larvae, sorting larvae into rearing containers, monitoring development and managing specimen data. This position is to support ongoing research in insect taxonomy with the goal of discovering and describing the currently unknown larvae of the very well known (adult) desert stink beetles. Applicants must have the desire and ability to handle live insects and have good organizational and data management skills. Interest in insect taxonomy, natural history and species descriptions is desired.

Interested students please contact nico.franz@asu.edu as soon as possible.
